

Pagination

All top-level API resources have support for bulk fetches via "list" API methods. For instance, you can list members. These list API methods share a common structure, taking at least these three parameters: **limit**, **startingAfter** and **endingBefore**.

SafetyWing's list API methods use cursor-based pagination via the **startingAfter** and **endingBefore** parameters. Both parameters take an existing object ID value (see below) and return objects respectively in ascending order (**startingAfter**) and descending order (**endingBefore**). The **endingBefore** parameter returns objects listed before the named object. The **startingAfter** parameter returns objects listed after the named object. These parameters are exclusive -- only one of **startingAfter** OR **endingBefore** may be used.

| Request parameter | Description |
|-------------------|--|
| startingAfter | A cursor for use in pagination. startingAfter is an object ID that defines your place in the list. For instance, if you make a list request and receive 100 objects, ending with 1234 (member ID for a Remote Health user), your subsequent call can include startingAfter=1234 in order to fetch the next page of the list. |
| endingBefore | A cursor for use in pagination. endingBefore is an object ID that defines your place in the list. For instance, if you make a list request and receive 100 objects, starting with 1234 (member ID for a Remote Health user), your subsequent call can include endingBefore=1234 in order to fetch the previous page of the list. |
| limit | A limit on the number of objects to be returned, between 1 and 100. This parameter is optional and by default set to 100. |

Example list response:

JSON

```
{
  "has_more":true,
```

```
"data": [  
  {  
    "id": 12345678,  
    "email": "test@safetywing.com",  
    "insuranceStartDate": "2022-01-01",  
    "insuranceExpiryDate": "2022-12-31",  
    "annualCost": "20.30",  
    "planId": 2,  
    "planName": "Premium",  
    "status": "ACTIVE",  
    "firstName": "John",  
    "lastName": "Doe",  
    "birthdate": "1980-01-01",  
    "citizenship": "CA",  
    "residency": "CA",  
    {...}  
  },  
  {...},  
  {...}  
]
```

| Response parameter | Description |
|--------------------|--|
| data | An array containing the response elements, paginated by requested parameters. |
| hasMore | Whether or not there are more elements available after this set. If false, this is the last dataset of the list. |
